### 8.1.2 Usage of Attributes from received IOD's

No SOP Class specific fields are required.

### 8.1.3 Attribute Mapping

The tables below show the relationships between attributes received via Modality Worklist, stored in acquired images and communicated via MPPS.

The cell content conventions should be read as follows:

**Copy:** The value will be copied from a corresponding source attribute of another DICOM object, as defined by the table column.

**Copy from: <DICOM attribute>:** The source as specified in the referenced DICOM attribute will be used instead of using the DICOM attribute of the same row as the source.

**Equal (internally generated):** The value will be internally generated which may be used in more than one DICOM object.

**Table 8.1-87**  
**SCHEDULED CASE - ATTRIBUTE MAPPING BETWEEN MODALITY WORKLIST, IMAGE AND MPPS**

| Attribute Name                       | Tag         | Modality Worklist | Image IOD                                                |                                                                                                                                                                                      | MPPS IOD                                                 |                                                                                                                                                                                      |

#### 8.1.4 Coerced/Modified Fields

Not applicable.

## 8.2 DATA DICTIONARY OF PRIVATE ATTRIBUTES

This product reserves private attribute values in the groups 0029 and 7015.

The private attributes added to created SOP instances or directory records are listed in Table 8.1-19.

## 8.3 CODED TERMINOLOGY AND TEMPLATES

Refer to 8.7 STANDARD EXTENDED AND PRIVATE TEMPLATES.

## 8.4 GRAYSCALE IMAGE CONSISTENCY

Not applicable.

## 8.5 STANDARD EXTENDED/SPECIALIZED/PRIVATE SOP CLASSES

### 8.5.1 Standard Extended SOP Classes - US Image Storage and US Multi-frame Image Storage

**Table 8.5-1**  
**US IMAGE EXTENDED ATTRIBUTES**

| Attribute Name | Tag         | VR | Value                                                                                                                                                                                                                                             | Presence of Value | Source |
|----------------|-------------|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|--------|
| Pixel Spacing  | (0028,0030) | DS | Pixel Spacing is only added if the user has configured this attribute to be included and the ultrasound image contains a 2D region.<br>Pixel Spacing will enable measurements on DICOM viewers that do not support Ultrasound Region Calibration. | ANAP              | AUTO   |

## 8.6 PRIVATE TRANSFER SYNTAXES

Not applicable.

## 8.7 STANDARD EXTENDED AND PRIVATE TEMPLATES

### 8.7.1 Standard Extended Template - TID 5100 Vascular Ultrasound Procedure Report

This template extension is only available to user-defined Abdominal measurements.  
The user can select code sets from CID 0365 to be embedded in those measurements.

### 8.7.2 Private Template - TID 0360 Radiology Procedure Report

TID 0360 is only available to user-defined Abdominal measurements.

The user can select code sets from CID 0364 to be embedded in those measurements.

## **8.8 DICOM Security Profile Details**

### **8.8.1 Audit Trail Messages**

The following tables specify the DICOM Specific Audit Messages that this product can detect and report. It defines the list of triggers that will cause audit message to be generated, if these triggers can be configured or not. It also specifies if the content of the Audit message can be configured or not.

**Table 8.8-1: Audit Messages and Triggers**

| <b>Audit Message</b>               | <b>Usage</b> | <b>Supported Triggers</b>                                                                                                                  | <b>Configurable Triggers</b> | <b>Configurable Message</b> | <b>Comments</b> |
|------------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-----------------------------|-----------------|
| Application Activity               | Used         | Startup/ Shutdown of product                                                                                                               | N                            | N                           |                 |

The following table specifies the implementation detail of each audit message supported by this product.

**M** This element or attribute is mandatory

**U** This element or attribute is user optional. The creator may include it or omit it.

**MC** This element or attribute is mandatory if a specified condition is true.

**UC** This element or attribute may be present only if a specified condition is true, if the user chooses to include it.

### 8.8.2 Secure Transport Connection Details

The following table specifies the cipher suites that this product can support in each profile.

**Table 8.8-15: Secure Transport Connection Profiles and Cipher Suites**

| Profile (Protocol)                                                                | Cipher Suite                                  | Default Preference Order (from 1=preferred to n=less preferred) |
|-----------------------------------------------------------------------------------|-----------------------------------------------|-----------------------------------------------------------------|
| BCP 195 RFC 8996, 9325 TLS Secure Transport Connection Profile (TLS 1.3)          | TLS_AES_256_GCM_SHA384                        | 1                                                               |
|                                                                                   | TLS_AES_128_GCM_SHA256                        | 2                                                               |
|                                                                                   | TLS_CHACHA20_POLY1305_SHA256                  | 3                                                               |
